-JAD FAWAZ

-MOHAMED KHASAWNEH

CLOWNFISH AND SEA ANEMONES FORM A MUTUALISTIC SYMBIOTIC RELATIONSHIP, MEANING BOTH SPECIES BENEFIT FROM LIVING TOGETHER

So how does it work ??

The clownfish gains protection from predators by hiding among the anemone's stinging tentacles, while the anemone receives food scraps and cleaning services from the clownfish

Benefits for the sea anemone

Clownfish chase away fish that might eat or damage the anemone.

They drop food scraps that the anemone consumes.

Their movement helps circulate water around the anemone, improving oxygen flow

Benefits for Clownfish

1-Protection from predators

The stinging tentacles of the sea anemone deter most fish.

2-Safe shelter

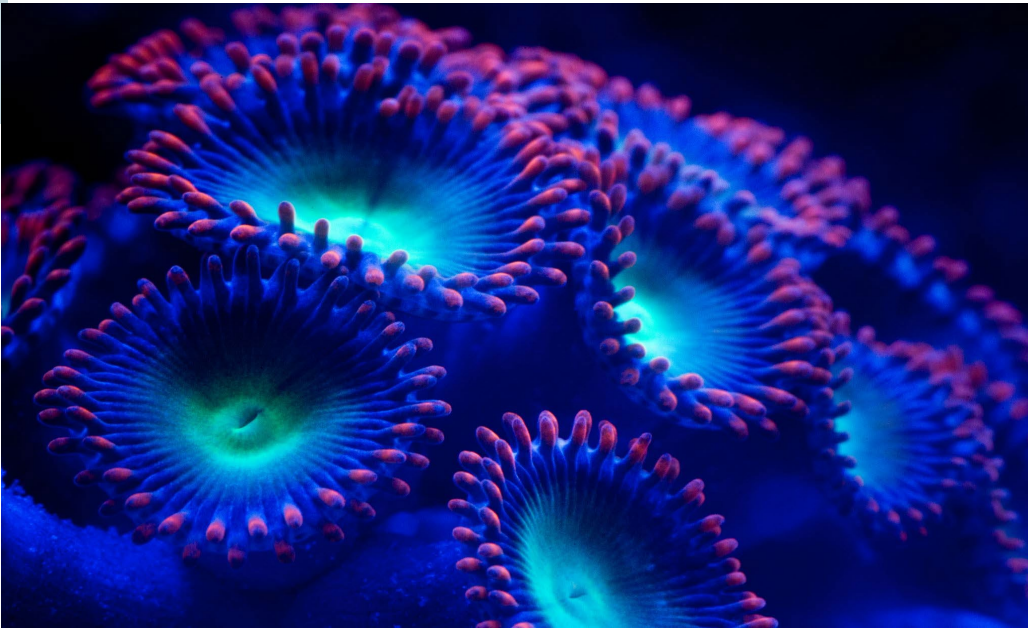

Anemones provide a permanent home where clownfish can lay eggs and raise young

3-Food supply

Clownfish eat leftover prey caught by the anemone.

SEA ANEMONE AND CLOWN LIVES TOGETHER IN THE OCEANS ,
SEA ANEMONE PROTECTS THE CLOWN FISH FROM PRETADORS ,
CLOWN FISHS CLEAN THE SEA ANEMONE AND GIVE THEM FOOD

.
